

1. Create a new folder called Shopping
2. Initialize a new git repo inside of the Shopping folder (make sure you're not already inside of a Git repo!)
3. Make a new file called yard.txt
4. Make another new file called groceries.txt
5. Make a commit that includes both empty files. The message should be "create yard and groceries lists"
6. In the yard.txt file, add the following changes:
 7. - 2 bags of potting soil
 8. - 1 bag of worm castings
9. In the groceries.txt file, add the following:
 10. - 4 tomatoes
 11. - 6 shallots
 12. - 1 fennel bulb
13. Make a new commit, including **ONLY the changes from the groceries.txt file**. The commit message should be "add ingredients for tomato soup"
14. Make a second commit including **ONLY the changes to the yard.txt file**. It should have the commit message "add items needed for garden box"
15. Next up, add the following line to the end of groceries.txt
 16. - couple of seed potatos
17. In the yard.txt file, change the first line so that it says "**3** bags of potting soil" instead of "2 bags of potting soil"
 18. - 3 bags of potting soil
 19. - 1 bag of worm castings
20. **Make a commit that includes the changes to BOTH files**. The message should read "add items needed to grow potatoes"
